

JATIN VISHWAKARMA

Full-Stack Web Developer | Associate Software Engineer

Valsad, Gujarat, India · 7525949831 · jatinvishwakarma4310@gmail.com
github.com/jatin7425 · linkedin.com/in/jatin7425

SUMMARY

Full-stack developer with professional experience building secure web applications using FastAPI, Flask, Node.js, React, and PostgreSQL. Delivered backend systems, payment flows, RBAC, automation pipelines, and scalable APIs for live products. Strong focus on clean architecture, performance, and real-world problem solving.

EXPERIENCE

Associate Software Engineer | IT Idol Technologies

June 2025 – Present · Valsad, Gujarat

- Promoted from intern to full-time engineer based on exceptional internship performance.
- Architecting and developing backend services using Python and Node.js-based frameworks.
- Building React.js frontends and integrating them with RESTful APIs for production applications.
- Engineering web scraping pipelines and backend automation workflows.
- Leading end-to-end backend delivery for 2 live projects.

Python Developer Intern | IT Idol Technologies

Jan 2025 – June 2025 · Valsad, Gujarat

- Joined via on-campus placement and contributed to a live production codebase from day one.
- Built and deployed backend services and RESTful APIs using FastAPI.
- Engineered a key investment-calculation feature using complex mathematical models and business logic for cost-benefit analysis and future return projections.
- Consistently delivered tasks ahead of schedule, exceeding performance expectations.

PROJECTS

Dtailr (Backend) — Node.js (TS), Fastify, Prisma, Docker, React (TS), Stripe, Twilio

- **Architected the foundational backend infrastructure** and bootstrapped the initial repository, establishing Docker orchestration and multi-environment setups from scratch.
- **Directed a 2-person engineering team**, designing the database schemas, defining API contracts for **50+** RESTful endpoints, and conducting code reviews to ensure alignment with architectural standards.
- **Designed complex system logic and workflows**, mapping out a multi-entity Stripe payment routing flow and conceptualizing a secure RBAC schema for **3** distinct user profiles, delegating execution to the team.
- **Conceptualized and specified geospatial database optimizations**, designing the logic for custom SQL stored procedures that reduced location-based query latency to an average of 150-200ms, which the team implemented under my guidance.
- **Hands-on implemented automated communication pipelines**, successfully integrating Twilio APIs and configuring DKIM domain verification to guarantee high-deliverability transactional notifications.

iPlanPilot (Backend) — Node.js, Express, Prisma ORM, PostgreSQL, Docker

- Architected and built the company's internal HRMS as a microservices platform from scratch.
- Designed core microservices using Node.js (Express), Prisma ORM, and PostgreSQL, enabling independent scaling of each service.

- Implemented RBAC handling 8 roles across 5 microservices and a type-safe modular database layer shared across the entire microservices ecosystem.
- Engineered a robust **bash** pipeline to automate local development workflows across **5** microservices, consolidating Docker orchestration, Prisma migrations, and data seeding to eliminate manual setup and save engineer time by an estimated **2 to 3 hours** of debugging and trial-and-error per setup.

Weapon Inventory — *Python, FastAPI, MongoDB*

- **Optimized critical data migration pipelines**, reducing the transfer time of 200k+ rows from 15 days to 2 days while implementing automated rollback and data-validation failsafes.
- **Resolved catastrophic post-migration API bottlenecks**, slashing response times from 10 minutes to under 4 seconds by replacing redundant database queries with in-memory caching and parallel processing.
- **Gained hands-on experience with AWS CloudWatch and S3** by navigating existing infrastructure to monitor post-migration logs and verify object storage.

Restaurant Price Upload Portal — *Python, JavaScript, Azure Functions, Azure Static Web Apps, Azure Blob Storage, SQL/MySQL, Azure SignalR*

- Helped build an internal automation platform that cut menu and pricing update turnaround from weeks to minutes by replacing manual change handling with Excel-driven Azure workflows.
- Engineered backend functions that transformed bulk pricing spreadsheets into YumAdmin-compatible updates, triggered downstream syncs into CFC/MuleSoft flows, and logged each run for auditability.
- Implemented QA pipelines that cross-checked pricing data between source spreadsheets, YumAdmin, and downstream systems before and after deployment.
- Improved accessibility for business teams by supporting a web-based orchestrator that allowed non-technical users to launch pricing operations and review workflow outcomes without direct backend intervention.
- Worked across cloud integration layers including file storage, secrets management, HTTP-triggered serverless services, and third-party automation touchpoints such as UiPath and MuleSoft.

TECHNICAL SKILLS

Backend	Python, FastAPI, Flask, Node.js, Express.js, Fastify
Frontend	React, Vite, JavaScript (ES6+), TypeScript, HTML5, CSS3
Databases	PostgreSQL, MySQL, MongoDB
Styling	Tailwind CSS, Bootstrap
Auth & APIs	RESTful APIs, JWT, RBAC, Stripe, Twilio
DevOps & Tools	Git, Docker, Docker Compose, Nginx, Linux, CI/CD, Redis
Cloud	AWS S3, Azure Functions, Azure Static Web Apps, GitHub Workflows
